

Performance Testing Report – SauceDemo Web Application

This report presents the execution results of performance testing conducted on the SauceDemo web application using Apache JMeter. The testing focused on validating application stability, throughput, and response time behavior under concurrent virtual user load.

Test Configuration

Parameter	Value
Testing Tool	Apache JMeter 5.6.3
Concurrent Users	50 Virtual Users
Ramp-Up Period	10 Seconds
Loop Count	5
Total Samples Executed	750
Error Percentage	0.00%
Target Environment	SauceDemo Web Application

Performance Results Summary

Metric	Observed Value
Average Response Time	26 ms
95th Percentile Response Time	51 ms
99th Percentile Response Time	282 ms
Maximum Response Time	1049 ms
Throughput	74.9 requests/sec
Application Availability	95%+ Stable Execution
Pass Rate	100% Successful Requests

Tested Business Scenarios:

- Homepage Navigation Validation
- Login Workflow Execution
- Product Page Navigation
- Concurrent User Load Simulation
- Performance Metrics Collection and Analysis

HTML Dashboard Report

Observations:

- The application handled 50 concurrent virtual users successfully.
- No request failures were observed during execution.
- Response times remained stable throughout the test cycle.
- Throughput and response metrics indicate healthy application behavior under simulated load.
- The overall execution achieved stable performance with 95%+ application responsiveness.

Conclusion:

The SauceDemo application demonstrated stable performance characteristics under the executed load conditions. The Apache JMeter performance testing execution successfully validated concurrent user handling, request processing, and response time behavior. Based on the observed metrics and successful execution results, the application is considered stable for the tested workload scenario.
